

TRISTAN G. MARATOS

KNOXVILLE, TN 37931 • 865.599.5260 • tristanstuff@denjess.com • www.linkedin.com/in/tristan-maratos

SUMMARY

- **Adept, Receptive, and Capable Learner;** working knowledge of C#, .NET 8, Python, HTML5, CSS3, and JavaScript (ES6+) across independent software projects, building modular, layered applications and role-aware web platforms from the ground up.
- **Ardent problem solver;** quickly adapts to new environments and technologies, operating enterprise monitoring and security platforms including Splunk, Netroo, and internal Network Operations Center / Security Operations Center tools to support continuous, mission-critical operations.
- **Dedicated Results-Driven Achiever;** attained Private Pilot License (PPL) at the age of 19 through hard work and dedication, which required skills in organization, attention to detail, understanding of complex regulations and procedures, and confidence tempered with humility. The key to success was the ability to learn from experienced aviation instructors, then decompose and arrange large amounts of information to promote understanding and retention.

TECHNICAL SKILLS & COMPETENCIES

- | | | |
|------------------------------------|---|--|
| • C#, .NET 8 Development | • Linux Command-Line Administration | • Command-Line Interfaces (Telnet, CMD) |
| • Python, Programming | • Netroo Infrastructure Monitoring | • Access & Connectivity Troubleshooting |
| • HTML5, CSS3, JavaScript (ES6+) | • Bash Scripting & Automation | • RFID & Telemetry Monitoring |
| • Modular Application Design | • Virtualized Environments (VMware) | • Remote System Diagnostics |
| • MVVM Architecture Implementation | • Troubleshooting & Root Cause Analysis | • Incident Escalation Workflows |
| • Structured Data Handling | • Log Analysis & Event Investigation | • Workflow Automation Concepts |
| • Object-oriented programming | • Virtualized Environments | • Structured Investigative Documentation |
| • Independent Software Development | • Remote Systems Administration | • Cross-Team Technical Collaboration |

EXPERIENCE

Senior Analyst, Network / Security Operations Center (NOC SOC)

November 2024 – Present

Consolidated Nuclear Security, LLC., Oak Ridge, TN

- Triage security events within Splunk Enterprise Security (ES) in a 24/7 mission-critical environment
- Modify and refine SPL (Search Processing Language) queries to improve investigative context and support accurate alert classification
- Pivoted across related events within Splunk ES, adjusting search time ranges to validate scope and system impact
- Consolidate and restructure Splunk ES dashboards, optimizing underlying queries to reduce unnecessary resource consumption
- Correlate security and infrastructure telemetry across Splunk ES and Netroo Infrastructure Monitoring
- Analyze Windows Server event logs and enterprise system data to determine root cause and validate impact
- Document escalation rationale and investigative findings to support structured shift handoffs and audit traceability
- Operate within enterprise security governance procedures under time-sensitive operational conditions

Technical Support Specialist

April 2023 – October 2024

DeRoyal®, Powell, TN

- Supported Continuum®, a secure chain-of-custody and charge-capture platform managing high-value medical assets across regulated healthcare environments serving 8,000+ clinicians
- Performed structured incident triage across authentication workflows, user access controls, hardware interfaces, and network connectivity to sustain system availability and data integrity
- Analyzed HL7 (Health Level Seven) structured healthcare messaging logs to validate patient information, product assignments, and system record integrity across integrated healthcare systems
- Troubleshot RFID-enabled asset tracking systems, access-controlled vault devices, maglocks, and associated interface hardware to restore operational continuity
- Investigated system alerts and executed downtime and recovery procedures in coordination with internal stakeholders to minimize service disruption
- Utilized remote access tools to diagnose client-side configuration issues across desktops, touchscreen interfaces, and tablet devices
- Maintained accurate service records and asset tracking documentation to support audit traceability and compliance requirements
- Collaborated across operations and engineering teams to identify root causes of recurring system issues and improve process consistency

Pilot Flying J - Contractor
Knoxville, TN

August 2022 – March 2023

Security Analyst

December 2022 – March 2023

- Selected from a team of eight to support real-time monitoring of Veeder-Root Tank Level Sensor (TLS) fuel pump management systems across distributed travel center environments
- Accessed TLS consoles and fuel pump controllers via Telnet and command-line interfaces to review alarm states, probe readings, and system telemetry
- Monitored dispenser instrumentation and fuel tank metrics, including volume levels, ullage, temperature, and water intrusion indicators
- Investigated alarm conditions through direct system interrogation and log analysis to determine root cause and distinguish environmental variance from actionable faults
- Executed remote corrective actions, including pump resets, alarm silencing, and system re-arming; escalated to field technicians when physical remediation was required
- Generated and tracked work orders within the ticketing system, documenting alarm context and resolution steps
- Collaborated with operations and maintenance teams to maintain infrastructure integrity and reduce downtime

IT Technician I

August 2022 – December 2022

- Executed enterprise-wide Windows 7-to-Windows 10 upgrades across Point-of-Sale (POS), loyalty, gate, and server systems within revenue-critical travel center environments
- Analyzed Windows server and application log files to diagnose and resolve failed transactions exceeding \$20,000, ensuring transaction integrity and financial reconciliation
- Coordinated Windows upgrades to minimize operational disruption across geographically distributed retail locations
- Utilized virtual machines to replicate system conditions and support controlled upgrade testing and troubleshooting
- Performed remote system administration through Citrix and NetSupport to manage distributed endpoints and infrastructure components
- Ensured service continuity by investigating system-level errors impacting receipt processing, loyalty systems, and gate controls
- Collaborated with operations and technical teams to maintain uptime across production systems supporting

Pizza / Sauté Cook

April 2018 – August 2022

Gavino's Italian Restaurant, Knoxville, TN

- Advanced from dishwasher to multi-station cook within one year; trusted to train others and operate in a fast-paced, team-dependent environment requiring consistency, timing, and accountability

EDUCATION

DeVry University

Knoxville, Tennessee
August 31, 2024

Bachelor of Science, *Computer Information Systems*

Concentration: *Cybersecurity Programming*

GPA: 3.83

Associate of Applied Science, *Information Technology & Networking*

April 22, 2023

Concentration: *Information Systems & Programming*

GPA: 3.76

Certificate in *Programming Essentials*

October 22, 2022

GPA: 3.70

Pellissippi State Community College

Knoxville, Tennessee
May 2022

Associate of Science

CERTIFICATIONS / TRAINING

Private Pilot License (PPL)

March 2019 - Present

Current hours flown 215.0

Currently pursuing Instrument Rating (IFR)

INTERESTS

Piano

June 2005 - Present

Classically trained pianist of 20+ years

Civil Air Patrol

August 2023 - Present

2nd Lieutenant

Aerospace Education Officer

Technical Projects*Flight Club Web Platform*

November 2025 - Present

- Designed and deployed a web application using HTML5, CSS3, and modern JavaScript, hosted via GitHub Pages
- Modular JavaScript architecture component to manage conditional access and support future scalable feature expansion
- Managed collaborative development using Git version control

Financial Planning Application

November 2025 - Present

- Developing a local-first desktop financial management application in C# and .NET 8 to support proactive financial planning and budget management
- Integrated MathNet.Numerics for computational processing and Tesseract OCR for document parsing functionality
- Separated application concerns across four explicit layers: UI, Business Logic, Service, and Data, with a single Excel workbook as the structured datastore
- Sequenced application startup through splash initialization and a legal acceptance gate before loading core services
- Isolated all secrets and credentials within a dedicated local Vault, separate from the workbook, config files, and application directories
